

200 Series

Hollow Shaft Encoder

Description:

MODEL 220C - SINGLE CHANNEL

The Model 220C Optical Encoder is designed to mount directly on a motor shaft. As the shaft rotates, a square wave output pulse is generated that varies at a rate proportional to shaft speed.

The Model 220C is ideal for motor speed control or tachometer feed back applications.

MODEL 230 - BI-DIRECTIONAL

The Model 230 Optical Encoder is designed to mount directly on a shaft for bi-directional applications. The encoder produces two symmetrical 50% duty cycle square wave output signals in quadrature relationship to each other. The signals lead or lag each other by 90 degrees depending upon the direction of rotation.

Typical Application:

* When using a 220 encoder with a Minitrol, Protrol or Positrol series, use a 12V encoder with a 5V 1W Zener (as IN4733) or 200Ω 1W dropping resistor between (+) DC supply and red lead. The 230 encoder requires a regulated power supply as KEP 115-12.

Mounting:

Circuit Diagram Per Channel:

A flexible housing stop must be provided to prevent improper bearing wear and overheating. Please do not mount outer housing rigidly.
